

In the Claims:

The claims are as follows.

1. (Original) A method for updating a database structure, comprising:

generating a dynamically changing list of control documents; and

processing by a first agent a first approved control document on the list, wherein

processing the first approved control document includes causing executing at least one task on the first approved control document, and wherein executing a task on the first approved control document includes updating the database structure.

2. (Original) The method of claim 1, further comprising:

generating a view of the list; and

accessing the view by the first agent prior to processing the first approved control document.

3. (Original) The method of claim 1, wherein executing a first task on the first approved control document includes executing the first task by the first agent.

4. (Original) The method of claim 1, wherein executing a first task on the first approved control document includes directly calling a second agent by the first agent and executing the first task by the second agent.

5. (Original) The method of claim 1, wherein executing a first task on the first approved control document includes indirectly calling a second agent by the first agent and executing the first task by the second agent.

6. (Original) The method of claim 1, further comprising processing by a second agent a second approved control document on the list, wherein processing the second approved control document includes causing executing at least one task on the second approved control document, and wherein executing a task on the second approved control document includes updating the database structure.

7. (Original) The method of claim 1, wherein executing a first task on the first approved control document includes updating a plurality of databases of the database structure.

8. (Original) The method of claim 1, wherein executing a first task on the first approved control document includes updating a first database of the database structure, and wherein executing a second task on the first approved control document includes updating a second database of the database structure.

9. (Original) The method of claim 1, wherein a first task and a second task on the first approved control document are not independent.

10. (Previously presented) The method of claim 1, wherein the first agent is a L-script operating

within a LD-software environment, and wherein the database structure includes LN-databases.

11. (Original) The method of claim 1, wherein executing a first task on the first approved control document includes replacing a name of a first person with a name of a second person in a plurality of databases of the database structure.

12. (Original) A system for updating a database structure, comprising:

a dynamically changing list of control documents; and

a first agent adapted to process a first approved control document on the list including to cause an execution of at least one task on the first approved control document, wherein an execution of a task on the first approved control document includes an updating of the database structure.

13. (Original) The system of claim 12, further comprising a view of the list, wherein the first agent is adapted to access the view before processing the first approved control document.

14. (Original) The system of claim 12, wherein an execution of a first task on the first approved control document includes an execution of the first task by the first agent.

15. (Original) The system of claim 12, wherein an execution of a first task on the first approved control document includes a direct calling of a second agent by the first agent and an execution of the first task by the second agent.

16. (Original) The system of claim 12, wherein an execution of a first task on the first approved control document includes an indirect calling of a second agent by the first agent and an execution of the first task by the second agent.

17. (Original) The system of claim 12, further comprising a second agent adapted to process a second approved control document on the list including to cause an execution of at least one task on the second approved control document, wherein an execution of a task on the second approved control document includes an updating of the database structure.

18. (Original) The system of claim 12, wherein an execution of a first task on the first approved control document includes an updating of a plurality of databases of the database structure.

19. (Original) The system of claim 12, wherein an execution of a first task on the first approved control document includes an updating of a first database of the database structure, and wherein an execution of a second task on the first approved control document includes an updating of a second database of the database structure.

20. (Original) The system of claim 12, wherein a first task and a second task on the first approved control document are not independent.

21. (Previously presented) The system of claim 12, wherein the first agent is a L-script operating within a LD-software environment, and wherein the database structure includes LN-databases.

22. (Original) The system of claim 12, wherein an execution of a first task on the first approved control document includes a replacing of a name of a first person with a name of a second person in a plurality of databases of the database structure.

23. (Original) A computer program product, comprising a computer usable medium having a computer readable code embodied therein, said computer readable code including an agent adapted to process an approved control document on a dynamically changing list of control documents, said to process including to cause an execution of at least one task on the approved control document, said execution of a task on the approved control document including an updating of the database structure.
